Have fun crafting!

Instructions: Dragon

Begin by making balls out of each of the given quantities of FIMO soft. Form a pear-shaped body out of the first ball and a cone shape out of the second one. Taper the end of the second one as this one is going to be the tail.

Use a modelling stick to press the tail onto the body.

Shape three more balls using half a strip of FIMO soft for each one. Make the legs out of two of these balls and use half each of the third ball for the arms. Use the modelling stick to make indents for the little toes and fingers and attach everything firmly to the body.

Roll a ball out of another half strip and extend the top half to create a pear shape and then bend a little to create the head.

Create small balls for the ears, press them flat, curve them and attach them to the head.

Make the nostrils and mouth using the modelling stick.

Shape two small white balls and two even smaller black ones for the eyes and press these onto the head. Then harden the dragon for 30 minutes at 110°C.

Thanks to the portioning aid, it's easy to cut your block of FIMO into the right portions.

Instructions: Walls and towers...

1

Shape a ball of indian red FIMO soft to a cone and add grooves for the roof tiles using a modelling stick.

2

Roll out 4 strips of FIMO effect granite (or dolphin grey) to an approx. 8 mm thick sheet and then cut it into a square shape. All you need to do then is to quickly make indents for the stone pattern and cut out along the top to create the battlements. That's it – the castle wall is finished!

3

Repeat using a whole block of FIMO soft granite (or dolphin grey) and shape to a round tower.

This method is incredibly easy and can be used to create the entire castle.

4

Harden all of the finished pieces in the oven for 30 minutes at 110°C.

Tip: You can use the 'Unicorn' Kits for Kids to make the knights' horses with. A fabulous tournament backdrop is available for download on the internet at: www.staedtler.com.
